NGUYỄN PHÚC THỊNH

Senior .NET Fullstack Developer

Phone: 0377700492 | **Email:** thinhnguyen.itengineer@gmail.com

LinkedIn: linkedin.com/in/thinh-nguyen-it

SUMMARY

Senior .NET Fullstack Developer with **7+ years of experience** building robust, scalable applications with .NET, ReactJS, and SQL Server across microservices and clean architecture. Proven ability to **own features end-to-end** — from stakeholder requirements to production — and to **replace costly third-party SaaS with in-house solutions** that cut real budget. An **early adopter of AI-assisted engineering** (Cursor, Claude) to accelerate delivery while keeping full ownership of design, code review, and production quality. Security-aware, collaborative, and driven to deliver high-impact results aligned with business goals.

RECENT FOCUSED SKILLS

- **AI-assisted Development:** Hands-on experience using **Cursor** and **Claude** to develop, refactor, and ship production applications — accelerating delivery while retaining engineer-led design and code review.
- **Backend:** Proficient in C# and .NET 7+ for building scalable backends and RESTful APIs with Entity Framework.
- **Frontend:** React, Redux, HTML, SCSS, and vanilla JavaScript, including Micro Frontend architecture.
- **UI Libraries:** Semantic UI, Ant Design (AntD), and Reactstrap.
- **Authentication:** SSO/OAuth with Keycloak for authentication and authorization.
- **Database & Search:** SQL Server, PostgreSQL, and Elasticsearch.
- **Cloud & Messaging:** Azure Blob Storage, Azure Service Bus, RabbitMQ, AKS (Kubernetes).
- **Integrations:** BambooHR, Viettel vContract e-signature, LinkSquares/Chamelio CLM, SharePoint/Excel sync.
- **Methodology:** Microservices Architecture, Agile Scrum.
- **Others:** Power BI, Problem-Solving, Git, GitLab, Jira.

WORK EXPERIENCE

OPSWAT — Software Engineer II

Jul 2025 - Present

Department: Enterprise Applications

Project: OPSWAT Connect Platform (Size: 6)

Description: An internal enterprise platform integrating multiple business applications with centralized authentication, content management, and reporting for OPSWAT's global offices.

Tech Stack: Keycloak (SSO), Micro Frontend, Microservices, .NET, ReactJS, RabbitMQ, PostgreSQL, Elasticsearch, Azure Blob Storage, AKS.

AI Tools: Cursor, **Claude** — used daily for feature development, refactoring, and data migrations with engineer-led review.

Key Contributions:

- **Cost & platform strategy:** Replaced the external Kuberno platform with an in-house Connect application, delivering an estimated **USD 15K in annual savings** while gaining stronger control over data, security, and product roadmap.
- **Authentication (owner):** Designed and implemented **Keycloak-based SSO** and authorization flows end-to-end for Connect and the integrated in-app chat.
- **Legal Entity Management (solo):** Single-handedly designed, built, and shipped the Legal Entities Management application, **replacing the external Kuberno platform**, aligned with legal/business requirements and local deployment.
- **Wallboard & Announcements (solo):** Built an internal wallboard and announcements platform — live streaming, content display on office TVs across global offices, Amazon reports, and **PowerPoint integration on Connect** — replacing a third-party wallboard SaaS.
- **Connect product surface:** Delivered core modules including global search, manager banner, company KPI, My Connect, Production Release sync from Excel/SharePoint with DB import scripts, Custom Reports, and the CSAT service.
- **Enterprise integrations:** Built BambooHR automation and the **BambooHR ↔ Viettel vContract** contract & signed-document sync (callback-driven, idempotent SyncLog with retry); contributed to LinkSquares → Chamelio CLM migration and ticket management (views, export, automation).
- **Security remediation:** Hardened the platform — authorization enforcement, SignalR auth, cache-key collision fixes, and ForwardedHeaders spoofing mitigation.
- **AI-assisted engineering:** Leveraged **Cursor** and **Claude** in daily development to build features, run data migrations, and refactor code — pairing AI-driven productivity with rigorous manual code review and security-aware practices to uphold production quality.

Auvenir — Senior Fullstack Developer
Mar 2022 - Jun 2025

Project: Auvenir (Size: 250+)

Description: Auditing systems for large enterprises like **Deloitte, Audit NZ, and Ontario**, supporting complex audit and compliance needs.

Tech Stack: .NET 6/8, REST API, SQL Server, Redis, Microservices, JavaScript, ReactJS, SCSS, Azure Service Bus, Azure Storage, SharePoint Online, Power BI, Azure Functions.

Key Contributions:

- Collaborated with PO, BA, and Designers during Sprint Planning to align on features and product goals.
- Provided **technical recommendations for complex features**, supporting the team lead on architectural decisions.
- Led the **migration from .NET 6 to .NET 8**, ensuring a smooth transition and full compatibility across the application.
- Wrote and managed **stored procedures and views in SQL Server** for Power BI integration.
- Managed **CI/CD pipelines in Azure DevOps** and monitored system health with Azure Application Insights.
- Restored large databases to reproduce and fix complex production bugs; guided new members through onboarding.

Additional Project: GL — all-in-one e-commerce platform with affiliate marketing (Size: 100+, Middle Fullstack Developer). Stack: .NET 8, ReactJS, REST API, Redis, PostgreSQL, Microservices, TypeScript, SASS.

Logi Gear Company — Junior Fullstack Developer
Mar 2021 - Mar 2022

- **Led a project team of 4**, mentoring junior developers and recommending suitable technologies and solutions.
- Broke down tasks, conducted **code reviews**, and ensured quality across releases.
- Worked with Product Owner and Business Analyst during Sprint Planning; supported database design and development.

Projects: ACB Green (Asia Commercial Bank green-finance web project) and CDO (HR management tool). Stack: .NET, Entity Framework, ReactJS, SQL Server / PostgreSQL, JWT.

Evizi Company — Junior Fullstack Developer
Mar 2020 - Mar 2021

- Analyzed requirements and implemented technical tasks of moderate complexity with clean, maintainable code and unit tests.
- Migrated **1M+ records** — data and images — from the Caspio platform to **Azure SQL Server**.

Projects: Avelino, Reliantehs. Stack: C#, .NET Core, Entity Framework, ReactJS, SQL Server, Azure Functions, Caspio.

Fujinet — Fresher Web Developer
Jan 2019 - Mar 2020

- Implemented features, fixed bugs, and maintained systems under senior guidance; learned the company's development processes and stack.

Projects: AutoShift, Shisankanri, ASS. Stack: .NET, Entity Framework, ReactJS, SQL Server.

EDUCATION

Nong Lam HCM University
2015 - 2019

Major: Information Technology

- Comprehensive training in software development, information systems, databases, networking, and cybersecurity.
- Hands-on with C#, Java, .NET, HTML, CSS, JavaScript, and SQL Server through labs, real-world projects, and internships.
